The gemological analysis of diamonds, precious stones and other mineral must be carried out by gemologists with many years experience in this field who have a keen sense of the professional code of ethics governing their work as well as thorough knowledge of crystallographic, optical and physical phenomenon.  
The identification of the various species and varieties of stones, the distinction between natural and synthetic material, as well as various treatment methods currently encountered are all very sensitive factors. More specifically for diamonds, the law of refraction and dispersion of light, the related geometric data as well as knowledge of all aspects involved in the cutting process are essential.

This gemological report is provided upon request of the customer and/or the owner of the gem. By making this report IGI does not agree to purchase or replace the article.
